

2001 Drinking Water Quality Report

RRA - CLUB LAKE-MEMPHIS NE WATER SYSTEM

Red River Authority of Texas

900 8th Street, Suite 520
Wichita Falls, Texas 76301
(940) 723-8697

Our Drinking Water Meets or Exceeds All Federal (EPA) Drinking Water Requirements

This report is a summary of the quality of the water we provide our customers. The analysis was made by using the data from the most recent U.S. Environmental Protection Agency (EPA) required tests and is presented in the attached pages. We hope this information helps you become more knowledgeable about what's in your drinking water.

Special Notice for the ELDERLY, INFANTS, CANCER PATIENTS, people with HIV/AIDS or other immune problems:

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800/426-4791).

En Espanol

Este reporte incluye informacion importante sobre el agua para tomar. Para obtener una copia de esta informacion traducir en Espanol, favor de llamar al telefono (940) 723-8697.

Where do we get our drinking water?

The **RRA - Club Lake - Memphis NE Water System** utilizes surface water from Greenbelt Lake as its sole source supply. Treated surface water is purchased from the Greenbelt Municipal and Industrial Water Authority (GMIWA), who owns and operates Greenbelt Lake. After treating the raw water from Greenbelt Lake through its treatment facilities, GMIWA transports the water to its customer entities located along a pipeline stretching from just north of Clarendon, Texas southeast to Crowell, Texas. The Texas Natural Resource Conservation Commission (TNRCC) will be reviewing all of Texas' drinking water sources. The source water assessment process will be completed within three years. It is important to

protect your drinking water by protecting your water source.

ALL Drinking Water May Contain Contaminants

When drinking water meets federal standards there may not be any health based benefits to purchasing bottled water or point of use devices. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800) 426-4791.

Public Participation Opportunities

The Authority's Board of Directors regularly meets on the third Wednesday of January, April, July, and September of each year. Specific times and locations of these and/or any special meetings can be obtained by contacting the Authority at (940) 723-8697.

For more information about the water quality of your water system, public participation programs, water conservation programs, and/or general operations policies, call (940) 723-8697 or e-mail the Authority at: info@rra.dst.tx.us. For service requests or reporting leaks after normal business hours, contact your District Manager, Mr. Scooter Gulley at (806) 447-1122 or Mr. Walt Rice at (806) 664-8385.

System Information

The Red River Authority of Texas owns and operates 29 registered public water supply systems through its Utility Division. The Utility Division maintains over 2,150 miles of transmission lines, two surface water treatment plants, 65 pumping facilities and serves approximately 10,000 customers residing in a 15 county area of the Red River Basin. The Utility Division is subdivided into geographical districts for proper management, maintenance, and financial accounting of individual systems.

The **RRA-Club Lake-Memphis NE Water**

System is one of the water systems operated by the Utility Division's District 16. In 2001, the system served 35 active connections with an average water use of 79 gallons per day per connection. The primary use of the water was rural domestic & weekend cottages. No major capital improvement items were scheduled for 2001.

The Authority has upgraded the Utility Division's Water Conservation and Drought Contingency Plan. Information on the plan is available on the Authority's web page at www.rra.dst.tx.us or can be obtained by calling (940) 723-8697.

Definitions:

Maximum Contaminant Level (MCL) –

The highest level of a contaminant in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) –

The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

Treatment Technique (TT) –

A required process intended to reduce the level of a contaminant in drinking water.

Action Level (AL) –

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

NTU – Nephelometric Turbidity Units

MFL – million fibers per liter

pCi/l – picocuries per liter (a measure of radioactivity)

ppm – parts per million, or milligrams per liter (mg/l)

ppb – parts per billion, or micrograms per liter (ug/l)

ppt – parts per trillion, or nanograms per liter

ppq – parts per quadrillion, or picograms per liter

SECONDARY CONSTITUENTS

Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste, color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of

Texas, not the EPA. These constituents are not causes for health concerns. Therefore, secondaries are not required to be reported in this document, but they may greatly affect the appearance and taste of your water.

About the Following Tables

U.S. EPA requires water systems to test up to 97 constituents. The attached table contains all of the federally regulated or monitored constituents which have been found in your drinking water.

Inorganics

Year	Constituent	Highest Level at Any Sampling Point	Range of Detected Levels	MCL	MCLG	Unit of Measure	Source of Constituent
2001	Barium	0.199	0.1990-0.1990	2	2	ppm	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
2001	Fluoride	0.9	0.9000-0.9000	4	4	ppm	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
2001	Nitrate	0.02	0.0200-0.0200	10	10	ppm	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
2001	Sodium	70.1	70.1000-70.1000	NA	NA	ppm	Erosion of natural deposits; By-product of oil field activity.

NA = MCL not applicable - not regulated. Special Monitoring Requirement.

Unregulated Contaminants

Year	Constituent	Average of All Sampling Points	Range of Detected Levels	Reason for Monitoring
2000-2000	Chloroform	40	40.0000-40.0000 ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants.
2000-2000	Bromoform	2.45	2.4500-2.4500 ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants.
2000-2000	Bromodichloromethane	36	36.0000-36.0000 ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants.
2000-2000	Chlorodibromomethane	26	26.0000-26.0000 ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants.

Turbidity

Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

Year	Constituent	Highest Single Measurement	Lowest Monthly % of Samples Meeting Limits	Turbidity Limits	Unit of Measure	Source of Constituent
2001	Turbidity	0.49	100	0.5	NTU	Soil Runoff

Conservation Tips

In the bathroom...

- ☺ Test toilets for leaks. Add a few drops of food coloring or a dye tablet into the water in the tank, but do not flush the toilet. Watch to see if the coloring appears in the bowl within a few minutes. If it does, the toilet has a silent leak that needs to be repaired.
- ☺ Take a shower instead of filling the tub and taking a bath. Showers with low-flow showerheads usually use less water.
- ☺ When brushing teeth, turn the water off until it is time to rinse.

In the kitchen...

- ☺ Never run the dishwasher without a full load. This practice will save water, energy, detergent and money.
- ☺ Use a small pan of cold water when cleaning vegetables, rather than letting the water run over them.

Out-of-Doors...

- ☺ Water lawns early in the morning to avoid evaporation.

- ☺ Water slowly for better absorption, and never water on windy days.
- ☺ Forget watering the streets, walks or driveways...they will never grow a thing.
- ☺ Do not “sweep” walks and driveways with the hose. Use a broom or rake instead.
- ☺ Use a sprinkler that produces large drops of water, rather than a fine mist.

Organics - NOT TESTED FOR OR NOT DETECTED

Total Coliform - NOT DETECTED

Disinfection By-Products - NOT TESTED FOR OR NOT DETECTED

Fecal Coliform - NOT DETECTED

Lead and Copper - NOT TESTED FOR OR NOT DETECTED
